Discovery Overview

What is a Discovery Service?

Why does my library need a Discovery Service?

What are the basic features of a discovery tool?

What are other libraries doing in the EIFL network?

Examples Examples Examples

Clive Wright

Vice President of Discovery Innovation for Latin America and Europe

Fast, simple access to all of the library's full-text content

(electronic and print)

in a single search box

- Audio
- Video

As well as…

Your Library Catalog & Institutional Repositories

Why get a Discovery Service?

"Imagine you're an undergraduate, a graduate student, or a professor. Your library subscribes to thousands of e-journals and thousands more e-books, hundreds of databases, and still has row upon row of shelves with books. Confronted by this overwhelming choice and with your essay due tonight, where do you start? You go to Google, of course.

Now imagine a world where that's not the case, where users actually start their discovery with a search engine provided by the library itself, and which directs them to the most appropriate content for their search that the library has available, rather than to the mixed bag of results that Google throws out."

http://exchanges.wiley.com/blog/2010/12/22/library-discovery-services-a-better-way-to-find-what-youre-looking-for/

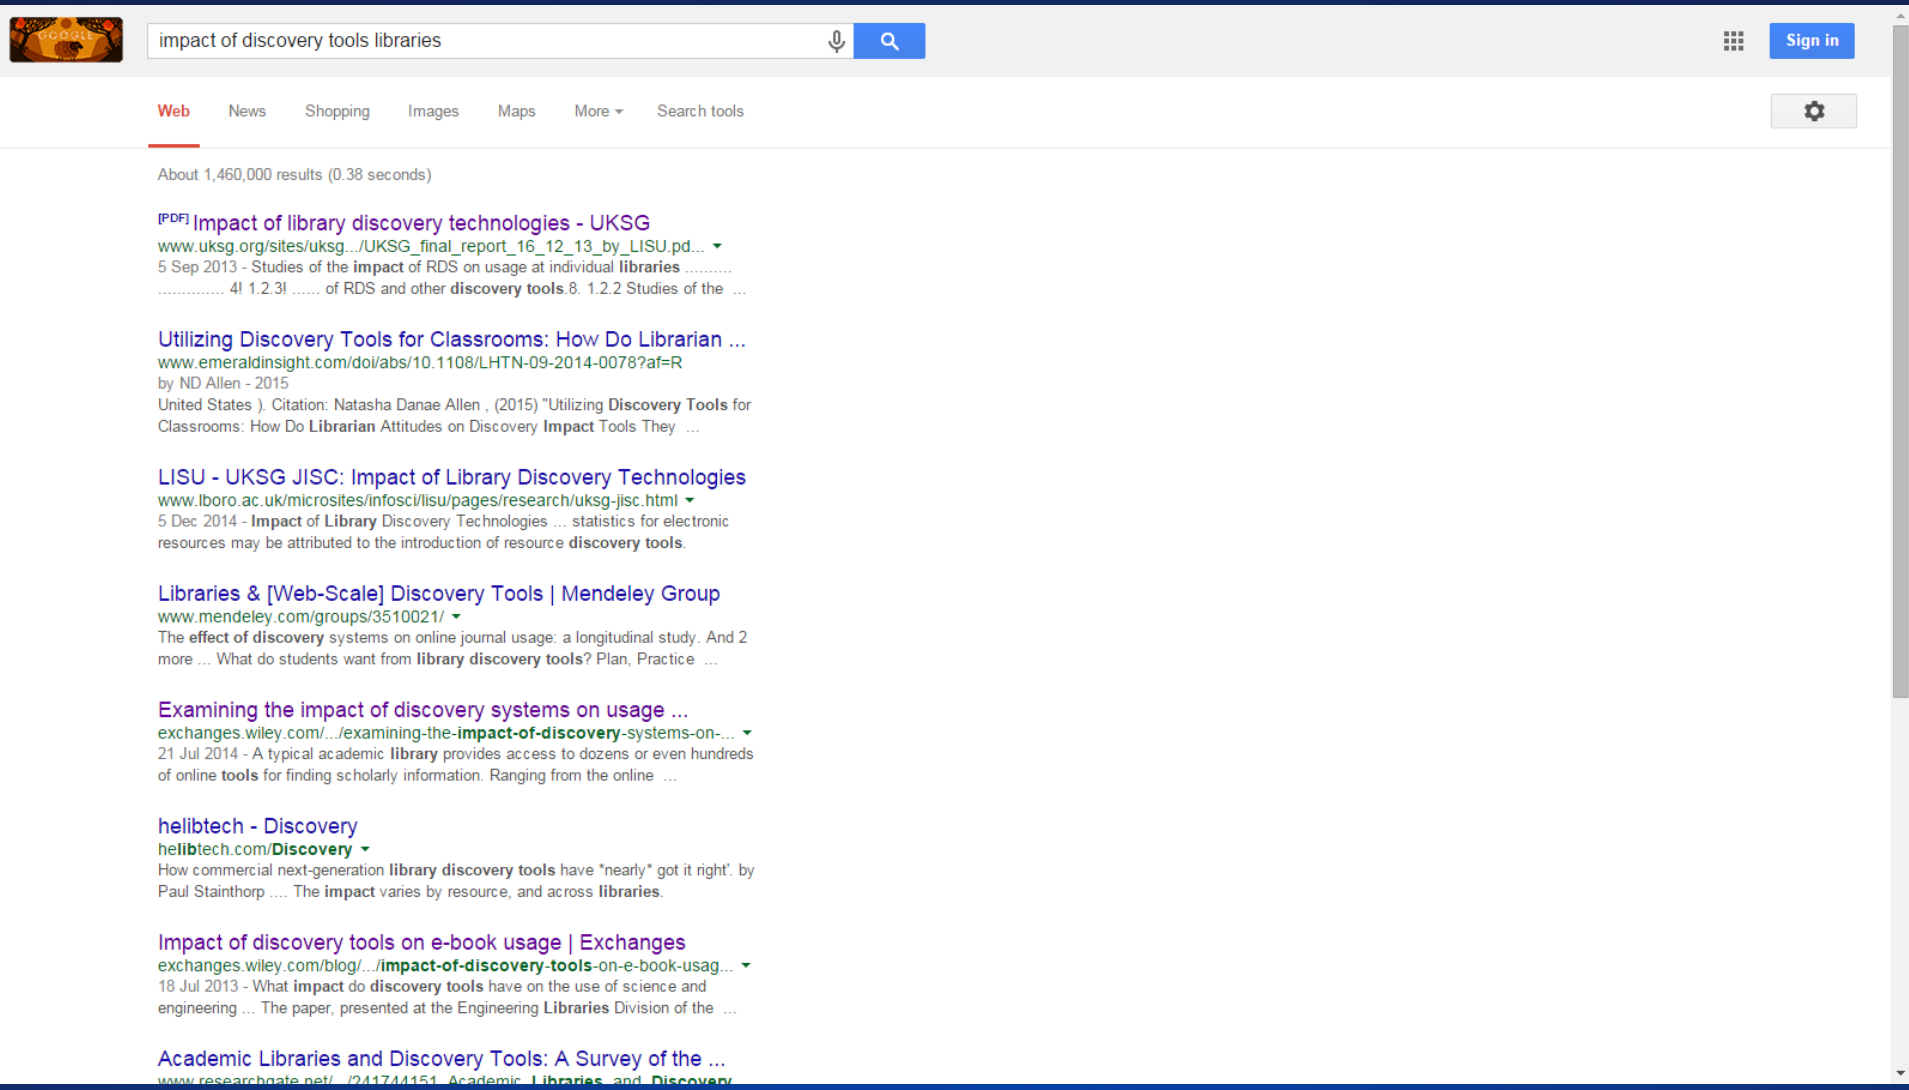
Why get a Discovery Service?

“Discovery systems address students’ needs by enabling easy cross-database access and access to sources they feel they can trust, especially when compared with Google.”

“Students using EDS also required fewer searches to find the information they needed and viewed fewer webpages before choosing resources than any of the other four test groups” (Google Scholar, the catalog, databases or other discovery tools)

"Paths of Discovery: Comparing the Search effectiveness of EBSCO Discovery Service, Summon, Google Scholar, and Conventional Library Resources," *College & Research Libraries*

Why get a Discovery Service?



Supporting the strategic plan of the academic library

GOAL #1

Promote a superior **user experience** through the development of innovative services that support the educational, cultural, and research needs of the university and its community partners.

Discovery Case Study: The University of Virginia

Esther Onega, The University of Virginia

Evaluation Criteria

How we decide

Functionality
Speed, relevancy

API
Necessary for incorporation into our catalog, VIRGO

Metadata
Searchable fields, field consistency, faceting

Quality Control
Results reflect library holdings

Coverage
Compatibility of Library holdings with those of the discovery service

Customer Service
MUST be available, helpful, and responsive

Relevancy
Are librarians and users finding results to be useful ?

Evaluating the Central Index

- Is the indexed content a good fit?
  - Inclusion of *your* journals titles and holdings
  - Inclusion of *your* subscribed databases
- Richness of metadata
- Ability to incorporate desired content in the future

Availability	Access online
Abstract	Presents a comparison and contrast of how Medieval writers transformed patristics Simon Magus and Nicolas of Antioch and adapted them to condemn Islam as heresy and denounce their immorality. Weapon used by medieval polemicists to assault Islam; Link of Nicolas with the sect of Nicolaitans established by author Irenaeus of Lyon; List of patristic writers who promoted the topos of Nicolaitism.

Relevancy and Value Ranking

Relevancy is extremely important and hard to pin down.

- The central index is a BIG pile of hay.
- The search and refinement tools are rakes
- The relevancy ranking is a magnet.

Relevancy and Value Ranking

- Weighted fields
- Exact match of term with field
- Density of terms
- Currency of item
- Document type
- Document length
- Locally owned

Superior Relevance Ranking

The system has the following priorities and has
no bias toward content from any provider:

1) **Match on subject headings**
   from controlled vocabularies
2) Match on article titles
3) Match on author keywords
4) Match on keywords within abstracts
5) Match on keywords within full text

Exact Matches: Exact matches are favored over partial matches – considering also the field in which those words appear (abstract vs. full text vs. title, etc.)

Density: The number of times the word(s) appears relative to the size of the document (more is better) – considering also the field in which those words appear (abstract vs. full text vs. title, etc.)

Evaluating the Discovery Layer

- Is it a good fit for your content?
- Is it a good fit for how your users search?
- Does it integrate with your other services?
