

Plagiarism detection made simple

URKUND is an automatic text-matching system made for detecting and preventing plagiarism, independently of language. We are passionate about improving the quality of education by addressing the problems connected to plagiarism and have done so since 1999.

Plagiarism detection made simple

STUDENT SUBMISSION

The URKUND process starts when a student submits a document to the system (email, direct upload or LMS).

THE ANALYSIS

The text is analysed and we begin to check for possible text similarity across our three source areas: published material, student material and the Internet.

FINDINGS

When a document starts to display similarities to other sources a matching profile begins to take shape.

THE RESULT

The process is finished and an analysis overview is generated and delivered to the teacher, either via the LMS or by email.
